What it is:

A pet themed application for pet enthusiasts to post their pets, ask our forum pet based questions, chat with friends, store events in the pet themed calendar.

Target Audience:

Pet owners, pet enthusiasts, people in need of extra sunshine and happiness, major corporations

Features:

- A social feed where users can post photos and videos of their pets, find new friends, and interact with other pet owners
- A calendar to keep track of all pet-related events from vet visits to playdates
- Dedicated forums where pet enthusiasts can ask questions, share advice, and swap stories about all things pets
- Create detailed profiles for each of your pets
- Connect with fellow pet owners via chatrooms or private messaging

Technology used:

What it looks like:
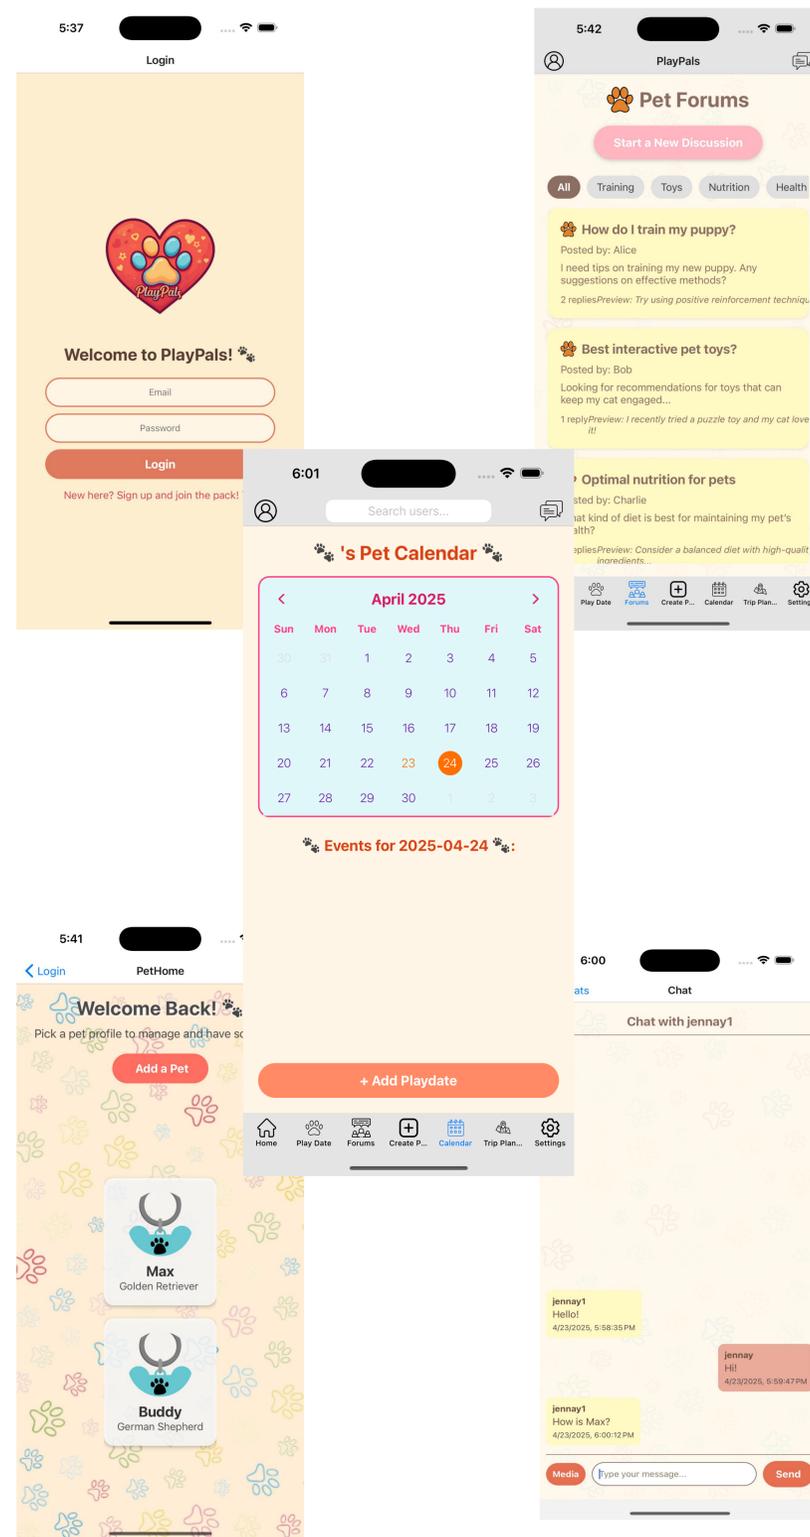

Problem Solved:

In the pet care industry, there are several established resources that provide partial solutions for pet owners' needs, from socializing pets to managing appointments. However, currently, no app addresses the full range of a pet owner's lifestyle all in one platform. Our app compiles everything a pet owner would ever need to ensure both the practical care and social needs of their pets are met. We provide a centralized platform that allows pet owners to stay connected, organized, and fully engaged in their pets' lives.

Timeline:

Phase 1

Planning
Defined the project goals, gathered requirements, and selected the tech stack

Phase 2

Development
Developed the app's core functionality, including user interaction and data handling

Phase 3

Testing
Fixed bugs, improved user experience

Phase 4

Finalize
Finalized UI design, optimized performance, and prepared for delivery
