Progress so far...

- Website template is fully functional
- JavaScript caching and dynamic caching is working in the background
- Offline viewing is working
- Application mode on cell phones is functional
- Passes Google Lighthouse Audits for a Progressive Web Application
Progress

Created an Orbiting Circle type function which handles overlapping with randomness.

Currently on Implementing Depth Function creating children.
Road Map

- Create database on Firebase
- Creating Depth Function
- Adding Attributes to objects
- Creating an Algorithm to tie in relational data
- Add input/entry to data structure
- Implement all to a PWA
