Instructor and Contact Information
Instructor: Melissa Danforth (pronouns: she/her)
Office Hours: Available on the Instructor's Contact Information page
Email: mdanforth@csub.edu

Virtual Class Information
This class uses a mix of pre-recorded videos and resources for the modules and weekly Zoom sessions (aka, this is a hybrid asynchronous and synchronous virtual course). The modules and Zoom information are posted on Moodle.

This class is centered around hands-on projects and the Zoom sessions will focus heavily on the projects. The Zoom sessions meet on Tuesdays from 4:00-5:00pm Pacific Daylight Time from Tuesday March 19th to Tuesday May 14th. There is no Zoom meeting on Tuesday March 26th, as that is Spring Break week at CSUB.

Attendance during Zoom sessions is optional, but strongly encouraged so you can ask questions. Webcams are not required during Zoom sessions. I have also configured Zoom to allow phone call-ins and to mask phone numbers for those who have to call in to attend.

Recordings from the Zoom sessions will be transferred over to Panopto for post-processing and closed captioning before being posted to Moodle. This means there is a processing delay for the automatic video transfer between Zoom and Panopto, and then for the closed captioning generation on Panopto. Please allow 2 business days for the videos to be processed and posted.

General closed-captioning note: The closed captioning is generated by Panopto's automatic captioning algorithm. I have edited some of the closed-captioning for the module videos to remove errors and clarify wording, but I did not have time to edit all of them. Also, I will not have time to edit the generated captions for the Zoom recordings. Please bear that in mind when watching the videos, but feel free to let me know if there’s something very glaringly wrong about the captioning that I should fix.

The video transferred to Panopto records the active speaker and shared screen from Zoom. This means the recording will capture anything that is said over a microphone (and your webcam if you have it on), but it will NOT have the public chat log. If you do not wish to appear in the recording, you can either public chat or private chat questions to me for me to answer during class. I'll anonymously repeat any chat questions before answering them.

Catalog Description
SCI 5200 Computational Thinking (3)
A graduate level course offered in an online format that satisfies the Computational Thinking requirement for an Introductory Supplementary Authorization in Computer Science. Topics include solving problems and designing systems using fundamental computing concepts such as decomposition, data representation, generalization/abstraction and algorithms. Students will learn effective computational thinking and programming techniques for the classroom through study of historically significant works, conducting literature search in methods/case studies, and critical discussion in seminar setting.

Prerequisites
Admission to the M.A. in Education - Curriculum and Instruction (C&I) program or to the Introductory Computer Science Supplementary Authorization (CSSA) program.

Units and Contact Time
3 units lecture. 8 week virtual format with a mix of pre-recorded videos and weekly Zoom sessions. Self-paced. Plan to spend about 6-8 hours per week on videos, reading assignments, quizzes, and course assignments to complete the course.

Type
Satisfies the Computational Thinking requirement of the California Introductory CSSA.

General Course Notes
This course is organized by weeks to give you a recommended pacing through the modules to complete the course within the 8 week format. This is just a recommended pacing, and you are free to go on to modules in future weeks. Modules are roughly categorized into “Foundational Kn” (Weeks 1 through 4), “Teaching and Lesson Plans” (Week 5 and 8), and “Block Programming” (Weeks 5 through 8).
Individual modules generally contain four parts: (1) the learning objectives for that module, (2) required reading assignments, (3) optional resources that go further in-depth on the topic, and (4) my slides and video about the module. Some modules are on the honor system, where you check-off Moodle’s completion box to indicate that you have completed the module. Some modules have an assessment quiz and/or assignment to gauge your learning. Assessment quizzes allow unlimited attempts, and the highest score is retained in the gradebook.

Later modules are locked to make sure you learn prerequisite knowledge and skills before attempting them. As you complete modules and get at least a 60% grade on the assessment quizzes, additional modules will be unlocked.

Collaborative and exploratory learning is encouraged in this course, with the below Academic Integrity note about turning in one’s own work in one’s own words. For most of these assignments, I am looking for an expression of creativity and critical thinking, which is a very individualized process, rather than one “correct” answer. It is exceedingly rare in computer science and computational thinking for there to only be one answer. Usually there are many different answers with different strengths and weaknesses, all of which are “correct” (i.e. they all solve the problem at hand). Please keep that in mind while you work on the assignments and discuss them with others in the course.

**Class Principles**

The following principles will guide this course:

- **Communication:** I fully understand if something unexpected has come up that interferes with your course work. Please communicate with me as soon as possible though, so we can discuss your options for moving forward in the course. Likewise, if something comes up with my situation, I will use the Moodle Announcement forum and Discord channels to keep you informed. It’s important to keep the lines of communication open.
- **Respect:** There are many situations where differing, but equally valid, opinions and/or solutions may exist. Respect the rights of others to form different conclusions than your own. This includes engaging in respectful and professional discourse in the discussion forums.
- **Critical Thinking:** Most of the assignments in this course will require applying critical thinking and analysis skills. My grading approach for those “thinking questions” is more about seeing your thought process than seeking “perfect” answers. There are many possible and equally valid solutions to most computing problems, so it is far more important to explain your thought process for choosing your solution, rather than coming up with a “perfect” solution.

**Required Textbook(s)**

**Recommended Textbook(s) and Other Supplementary Materials**

Recommended academic papers on computational thinking:

Resources that I have used to develop modules, but that you DO NOT need to have or purchase for this course (this information is provided in the spirit of appropriately citing my sources):

### Week/Section

#### Week 1
**Foundational Knowledge**
- Overview of the course and syllabus

#### Week 2
**Foundational Knowledge**
- Project Overview
  - Example Project Topic
  - Questions on Week 1 Modules

#### Week 3
**Foundational Knowledge**
- Applying Week 2’s Modules to Example Project
  - Questions on Week 2 Modules

#### Week 4
**Foundational Knowledge**
- Applying Week 3’s Modules to Example Project
  - Questions on Week 3 Modules

#### Week 5
**Teaching CS/CT Block Programming**
- Applying Week 4’s Modules to Example Project
  - Questions on Week 4 Modules

#### Week 6
**Block Programming**
- Code-along session to get started with Scratch
  - Questions on Week 5 Modules

#### Week 7
**Block Programming**
- Additional Scratch code-along session
  - Live debugging of any issues with Scratch programming project
  - Questions on Week 6 Modules

#### Week 8
**Teaching CS/CT Block Programming**
- Overview of the summer CSSA courses

### Online Modules

#### Week 1
- Module 0 - Demystifying Computer Science
- Module 1 - History of Computer Science
- Module 2 - Overview of Computational Thinking

#### Week 2
- Module 3 - Algorithmic Thinking
- Module 4 - Decomposition

#### Week 3
- Module 5 - Pattern Recognition and Generalization

#### Week 4
- Module 6 - Abstraction and Modeling
- Module 7 - Evaluation
- Module 8 - Cybersecurity Concepts for Algorithms and Program Design (optional)

#### Week 5
- Module 9 - “Do’s” and “Don’ts” of Teaching CS and Computational Thinking
- Module 10 - Block Programming Overview

#### Week 6
- Module 11 - Basic Concepts for Scratch Programming
- Module 12 - Flow Control in Scratch

#### Week 7
- Module 13 - Graphical and Audio Elements in Scratch
- Module 14 - Scripts and Subroutines in Scratch

#### Week 8
- Module 15 - Tips for Teaching Scratch

### Assignments

#### Week 1
- Participation: Complete Your Virtual Rolodex Entry
- Computing Diversity Discussion Forum
- Assignment 1: Choose a Project Topic

#### Week 2
- Quiz on Algorithmic Thinking
- Quiz on Decomposition

#### Week 3
- Quiz on Pattern Recognition and Generalization

#### Week 4
- Quiz on Abstraction and Modeling

#### Week 5
- Assignment 2: Foundational Knowledge Capstone Lesson Plan Discussion Forum

#### Week 6
- Block Programming Discussion Forum
- Quiz on Basic Concepts for Scratch Programming
- Quiz on Flow Control in Scratch

#### Week 7
- Quiz on Graphical and Audio Elements in Scratch
- Quiz on Scripts and Subroutines in Scratch
- Assignment 3: Scratch Programming Project

#### Week 8
- Assignment 4: Block Programming Lesson Plan

### Mapping to California K-12 Computer Science Standards

<table>
<thead>
<tr>
<th>Grade Level</th>
<th>Foundational Knowledge &amp; Lesson Plan Resources sections</th>
<th>Block Programming section</th>
</tr>
</thead>
</table>
| K-2         | K-2.AP.10 – Algorithms for tasks
             | K-2.AP.11 – Model how data is stored (variables)
             | K-2.AP.13 – Decomposition
             | K-2.AP.14 – Develop plan
             | K-2.AP.16 – Debug algorithm / program |
|             | K-2.AP.12 – Create program w/ loops
             | K-2.AP.14 – Develop plan for program
             | K-2.AP.16 – Debug algorithm / program
             | K-2.AP.17 – Describe programming steps / choices |
| 3-5         | 3-5.AP.10 – Compare / refine algorithms
             | 3-5.AP.13 – Decomposition
             | 3-5.AP.17 – Test / debug algorithm / program
             | 3-5.AP.19 – Describe choices made
             | 3-5.AP.11 – Create program w/ data (variables)
             | 3-5.AP.12 – Create program w/ loops, events, conditions
             | 3-5.AP.15 – Plan program w/ input from others
             | 3-5.AP.17 – Test / debug algorithm / program
             | 3-5.AP.18 – Peer programming / collaboration
             | 3-5.AP.19 – Describe choices made
             | 3-5.IC.21 – Accessibility concerns for technology |
### Grade Level

<table>
<thead>
<tr>
<th>Grade</th>
<th>Foundational Knowledge &amp; Lesson Plan Resources sections</th>
<th>Block Programming section</th>
</tr>
</thead>
</table>
| 6-8   | 6-8.NI.5 – Explain potential security threats (optional module on cybersecurity)  
6-8.AP.10 – Flowcharts and pseudocode  
6-8.AP.13 – Decomposition  
6-8.AP.15 – Incorporate diverse perspectives / societal need  
6-8.AP.17 – Systematically test w/ test cases  
6-8.AP.18 – Work collaboratively | 6-8.DA.9 – Test / analyze effects of changing variables  
6-8.AP.11 – Create clearly named variables w/ operators  
6-8.AP.12 – Create program w/ compound flow control  
6-8.AP.14 – Create procedures w/ parameters  
6-8.AP.15 – Incorporate feedback from team members  
6-8.AP.17 – Systematically test w/ test cases  
6-8.AP.18 – Work collaboratively  
6-8.IC.21 – Consider issues of bias and accessibility in design  
6-8.IC.22 – Collaborate w/ many contributors and incorporate diverse perspectives |
| 9-12  | 9-12.CS.1 – Describe abstraction  
9-12.DA.11 – Refine computational models  
9-12.AP.12 – Design algorithms  
9-12.AP.13 – Create generalized solutions  
9-12.AP.16 – Decomposition  
9-12.AP.20 – Evaluate artifact & refine  
9-12.AP.22 – Document and justify decisions  
9-12.IC.25 – Application of algorithm to different disciplines | 9-12.AP.14 – Justify using specific control structures  
9-12.AP.15 – Design project for practical use, personal use, or to address societal issue  
9-12.AP.17 – Use modular design  
9-12.AP.18 – Design for broad audience w/ user feedback  
9-12.AP.21 – Team programming and collaboration  
9-12.AP.22 – Document and justify decisions  
9-12.IC.24 – Identify impacts of bias / equity deficits on design |

### Academic Integrity Policy

You may discuss the assignments with others in the class, such as on the CSSA Discord channel or on the Moodle discussion forums. However, all assignments in this course are individual assignments. For individual assignments, each student must turn in their own work in their own words; no direct copying from any source or each other is allowed.

For example, you cannot copy-and-paste from a website or copy another student’s submission, but you can refer to that website and summarize what you’ve learned, or summarize your discussion with the other student. I even encourage you to add questions you still have, particularly to the checkpoint assignments, and I’ll customize my grading comments to answer those questions, as long as you submit your initial assignment before the feedback deadlines given below.

In particular, everyone should be coming up with their own solutions for the Foundational Knowledge Capstone and the Block Programming Lesson Plan. Even if you’ve chosen a similar topic or lesson plan, your solution should be unique to you, because you will be bringing you own unique experiences and perspectives to the problem. If I see a similar structure between multiple students’ submissions, I will return those for revision, with a more in-depth discussion about bringing your own creativity to the process.

Refer to the Academic Integrity policy in the campus catalog and class schedule for more details. You can also refer to the Academic Integrity policy at the Dean of Students Office at [https://www.csub.edu/osrr/](https://www.csub.edu/osrr/)

### Academic Accommodations

To request academic accommodations, please contact the Office of Services for Students with Disabilities (SSD) and email me an accommodations letter from the SSD Office. Policies from the SSD Office relating to accommodations, such as scheduling policies for using their testing center, must also be followed. For more information about the services and policies of the SSD Office, contact their staff by email and/or visit their website at [https://www.csub.edu/ssd/](https://www.csub.edu/ssd/)

### Grading Categories

</table>

Moodle will show your “grade to date”, where unsubmitted and/or ungraded assignments will not count against your grade, until May 14, 2024.

On the morning of May 15, 2024, Moodle will be reconfigured to count unsubmitted/ungraded assignments as a 0 grade, so you know what you need to submit before the end of the term.

Description of Grading Categories

The grading categories are as follows:

- Participation and Discussion: Participation assignments may be posted, such as completing your CSSA Virtual Rolodex entry. You are also required to participate in discussion boards on Moodle. You will need to create or participate in the indicated number of threads per discussion board for points in this category.

- Assessment Quizzes: The Foundational Knowledge and Block Programming parts of the course have assessment quizzes associated with some modules. You must score a 60% or higher to move on to the next module that has a quiz as a prerequisite. You can also attempt the quizzes as many times as you like and the highest score will be used for your grade.

- Assignment 1 - Project Topic Selection: This is where you will select your topic for the Foundational Knowledge Capstone app. The project topic must either apply computational thinking to another discipline (e.g., mathematics, biology, English, music, arts, etc.) or have a societal impact, such as a Citizen Science project, supporting a UN Sustainability Goal, helping people be good digital citizens, or otherwise helping society.

- Assignment 2 - Foundational Knowledge Capstone: This project has you create a simple “app” purely on paper (no programming involved) that walks through all of the stages of computational thinking to develop the “app”. This is similar to the problem description, project specification, and pseudocode stages of an actual programming project.

- Assignment 3 - Scratch Programming Project: You will program a Scratch project of your own choosing for this assignment, to show that you’ve learned how to program in Scratch. Extending and adapting public Scratch projects is allowed for this assignment (the “Modify” stage of the “Use-Modify-Create” model for computing)

- Assignment 4 - Block Programming Lesson Plan: This assignment has you adapt a lesson plan for use in your classroom (the “Modify” stage of the “Use-Modify-Create” model for computing). The lesson plan must teach one aspect of programming using either an unplugged method or Scratch, depending on what you feel is best for your students. You can use a lesson plan from your district, one that you have found online, or one from either the Lesson Plan Resources section or Block Programming modules as the basis for your submission.

Deadlines

There are no late penalties in this course, since this course is self-paced. Each quiz and assignment has been programmed with a recommended due date to help you keep on-track, but there is no penalty if you submit the assignment or complete the quiz after the due date and before the cut-off date.

There are the following deadlines for feedback and cut-off dates:

- Friday April 12th: This is the deadline for submitting your Project Topic Selection assignment to get feedback on if the topic is appropriate for the Foundational Knowledge Capstone.

- Friday April 26th: This is the deadline for submitting your Foundational Knowledge Capstone, Scratch Programming Project, and Block Programming Lesson Plan assignments early to get feedback prior to the cut-off date. Assignments submitted by this deadline will have the option to revise and resubmit prior to the cut-off date for regrading if you wish to improve your grade.

- Monday May 20th: This is the cut-off date for all submissions. All assignments must be turned in by 11:59pm on May 20, 2024 so I have sufficient time to grade assignments for all of my Spring courses before grades are due on May 22, 2024.

Please keep my workload in mind as well and try to submit your assignments in advance of these dates.
